## Mission Statement

At PowerMax we are passionate about exercise and wellness. Fitness is of the utmost importance in this day and lifestyle. More and more of us lead more sedentary, office-based lives as computers dominate many professions. Our goal at PowerMax is to Spread fitness awareness and get you fitter by making it as easy and as fun as possible for a longer, healthier, happier life.....

## Spiritual Mission Statement

1. Make people mentally fit by spreading Fitness awareness, motivating them to lead a healthier life through exercise
2. Giving detailed insights into the benefits of exercise, making individuals motivated to make fitness part of routine life.
3. Reduce medical cost and pain in people's life by promoting fitness.
4. Convey effectively the idea of how a healthy body contributes to a healthy mind and a peaceful life.

## Business Mission Statement & Guiding Area

1. Provide the highest quality of Health and Fitness Products which guarantee the safety and satisfying user experience.
2. Make affordable fitness equipment so all individuals have the privilege of being fit.
3. Consider the troubles and concerns of every customer and help them in terms of service support, installation, how to use and make the most effective use of the machine.
4. Make fitness equipment available in each nook and corner of the Planet Earth

## PowerMax Fitness is now ISO 9001:2015 Certified for Quality Assurance

# WalkPad® Series

*"Make more people fall in love with healthy sports life"*

The WalkPad series is 90% space-saving than the traditional treadmill and can be easily folded and stored with the help of a double folding design and smooth-rolling wheels. It is a cardio choice for any home facility looking for ultra-thin walking treadmill space with remote control, exclusive sports app, foot speed sensing patent, modern unique design with child lock protection. It is of this series which is 100% Pre-installed with-in the single box, which is convenient and quick.

They are usually double foldable machines, and the walking platform uses a soft and comfortable EVA cushioning layer to protect the joints. It comes with a smooth layer of low friction coefficient, water-resistant, and anti-slip running belt.

It can be used to monitor the health status of the body using a heart rate sensor and the body fat detective system while some are featured with a weight scale to measure body weight also. The benefits of using Powermax Fitness Treadmills are they are easy to use; help you to track your work out progress, helps in losing weight faster than running outdoor, Allows to choose preset work-out programs, Improves heart health, improves muscles and calves toning, easy to fold and space-saving design as they are able to fit under the bed or beside the cupboard and wheels for easy transportation.

# WalkPad-5<sup>®</sup>

<b>Applicable Age</b>	14 - 60 Years Old
<b>Warranty</b>	Lifetime Frame Warranty, 3 Year Motor Warranty and 1 Year Parts & Labor Warranty

# JogPad® Series

*"Make more people fall in love with healthy sports life"*

JogPad series is 90% space-saving than the traditional treadmill and can be easily folded and stored with the help of a Patented folding design and smooth-rolling wheels. The feature of putting the treadmill upright is the main unique selling point of the JogPad series. Its normal use is a treadmill, meeting the need for daily running. When the handrail is put down, it turns into a more space-saving walking pad, suitable for different use.

It is a cardio choice for any home facility looking for an ultra-thin walking treadmill space with remote control, exclusive sports app, foot speed sensing patent, modern unique design with child lock protection. It is of this series which is 100% Pre-installed with-in the single box, which is convenient and quick.

JogPad series is considered the best choice if you want to reap huge benefits with a little money and space. It is designed for domestic use only as the treadmill platform is a frequently used position, that is why we use high-density fiberboard to ensure its excellent quality; EVA cushioning layer with comfortable texture; smooth layer with low friction coefficient; wear-resistant and anti-slip running belt. The main feature that attracts is it comes with the motor less noise.

It can be used to monitor the health status of the body using a heart rate sensor and the body fat detective system while some are featured with a weight scale to measure body weight also. The benefits of using Powermax Fitness Treadmills are they are easy to use; help you to track your work out progress, helps in losing weight faster than running outdoor, Allows to choose preset work-out programs, Improves heart health, improves muscles and calves toning, easy to fold and space-saving design as they are able to fit under the bed or beside the cupboard and wheels for easy transportation.

## Touch Screen

*Trendy & Stylish*

### Fall in love with taking care of yourself!

Making your life easy with the all-new JogPad-2 Touch Screen Dual Display Treadmill with Bluetooth Speaker. Jogging on a treadmill with a top speed of 15 km per hour powered by a 2.5 Horse Power Peak DC motor makes this equipment very suitable for cardio. This JogPad-2 Touch Screen Dual Display Treadmill meets modern features as it has a dual display LED screen where parameters such as the time, speed, distance travelled, calories burnt, heart rate, etc, can be monitored. The benefits of running on this treadmill are quite a lot. A high amount of calorie burns, outside weather not hampering workouts, and technically very safe than running outside the house.

NEW WAY FOR WORKING  
SAY NO TO

## “THE SEATED”

PUTTING THE HANDRAIL DOWN, YOU WILL ENTER THE WALKING MODE. MOVE IT UNDER YOUR DESK, YOU WILL IMPROVE YOUR STATE OF WORKING.

## Smart Device BCA-130 Bluetooth Smart Scale

Works with "FEEL-IT", Free download at  and  Google play

Engineered for the health-conscious, the Powermax BCA-130 Bluetooth Smart Scale provides in-depth measurements of not only your weight, but also other key measurements that can aid you in optimum weight management. Bioimpedance is the common method used by household scales to calculate body composition. Powermax BCA-130 uses the Bioimpedance method by using 4 sensitive stainless steel electrodes to determine the hindrance of electrical flow through the body, and uses that to calculate the total body water. From the total body water, it can estimate the 13 key body compositions.

### Body Composition Data:

Weight, BMI, Body Fat, Fat-Free Body Weight, Subcutaneous Fat, Visceral Fat, Body Water, Skeletal Muscle, Muscle Mass, Bone Mass, Protein, BMR, Metabolic Age

### APP Features:

- App support Android & iOS
- Weighing Reminder
- Unlimited number of User
- Auto recognize family Members
- Auto LB/KG/ST recognition
- Cloud based data storage to ensure safety
- Connect to Apple health kit/Google Fit/Fitbit and more
- Password App Lock to ensure privacy
- Calendar based history review
- Social sharing of measurement and moments.

### Note:

1. Keep your App running while stepping on the scale platform to measure data.
2. Stepping on the scale without bare feet or Bluetooth pairing to App, would only measure the body weight

# BCA-150

## Smart Bluetooth Body Fat Scale

This digital scale is used to determine a person's weight. Furthermore, it is possible to measure, BMI body fat, water, muscle, and bone percentages and to determine your recommended daily calorie intake. This digital scale should not be used outdoors or in tropical climates. This digital scale is not designed for commercial use or operation in a company. Use the digital scale only for private purposes in living areas as any other use is not as intended. These digital scales meet all relevant norms and standards in relation to CE conformity.

### Body Composition Data:

Weight, Body Fat, Body Water, Visceral Fat, BMR, BMI, Muscle, Bone Mass, Metabolism, Protein, Obesity Degree, Body Age, Weight without Fat

### APP Features:

- App support Android & iOS
- Weighing Reminder
- 810.BLE Module Memory user
- Auto recognize family Members
- LB/KG/ST Conversion
- Cloud based data storage to ensure safety
- Connect to Apple health kit/Google Fit/Fitbit and more
- 4 Digits in LED Display
- Calendar based history review
- Social sharing of measurement and moments.
- Overload and low battery indication
- 4×1.5V AAA Battery Power
- 180kg/396lb Capacity

### Note:

1. Keep your App running while stepping on the scale platform to measure data.
2. Stepping on the scale without bare feet or Bluetooth pairing to App, would only measure the body weight

# VOSTA V3 VOLTAGE STABILIZER

Engineered for Heavy Treadmills and Home Use Appliances

Vosta V3 Voltage Stabilizer for Treadmills ensures optimal protection and performance of your equipment. With this voltage stabilizer there is no need to worry about voltage fluctuation.

## Features:

- Recommended for treadmills up to 3.0HP AC/DC motor
- Full protection design for Over Voltage, Under Voltage, Overheat, Short Circuit and Overload to protect your equipment
- Digital LCD display, continuously displays input & output voltage with 3 LED indicators
- Integrated with Zero cross switching technology with High Efficient Toroidal Transformer
- MCU controlled circuit for precision and regulated output
- 6s to 180s of integrated delay function
- CE certified
- Warranty - 3 Year Powermax Domestic India Warranty

## Specification:

- Input Voltage Range: 140~260 VAC
- Input Frequency: 50/60Hz
- Output Voltage: 220 VAC
- Output Accuracy:  $\pm 8\%$
- Efficiency: 98%
- Phase: Single phase
- Delay Time: 6s/180s selectable
- Certification: CE
- Operation Temperature: 0°C ~ 40°C
- Storage Temperature: -15°C ~ 45°C
- Operation Relative Humidity: 10%~90% RH, non-condensing
- IP Class: Ip20
- Material:
  - Front Panel: Metal
  - Cabinet: Metal
- Output Connector: Socket
- Capacity: 2000VA / 1200W
- Cooling Mode: Natural
- Net Weight: 5.1Kg
- Dimension: 250 x 140 x 175mm

## Appliances :

Treadmill upto 3.0HP AC/DC motor  
 Refrigeration equipments: Fan, Refrigerator, Chest freezer, Cooler and Air conditioner  
 Kitchen appliances: Microwave oven, Rice cooker  
 Entertainment appliances: TV, DVD, VCR, DVB, HiFi  
 IT & Office equipments: PC, Workstation, Fax machine, Photocopier, Server  
 Heating systems: Gas boiler, Circulation pump

# VOSTA V4 DIGITAL STABILIZER

Engineered for Treadmills and Home Use Appliances

Vosta V4 Voltage Stabilizer for Treadmills ensures optimal protection and performance of your equipment. With this voltage stabilizer there is no need to worry about voltage fluctuation.

## Features:

- Input Voltage Range: 180~270 VAC
- Output Voltage: 220 VAC ( $\pm 9\%$  Accuracy)
- Recommended for treadmills 3.0HP and above AC/DC motor and home use appliances
- Full protection design for High Voltage, Overload, Under Voltage, Overheat, Short Circuit and Overload to protect your equipment
- Digital LED display, continuously displays input & output voltage with 3 LED indicators
- Integrated with Zero cross switching technology with High Efficient, 100% Copper Toroidal Transformer
- MCU controlled circuit for precision and regulated output
- CE certified

## Specification:

- Output Power : 4KVA
- Input Frequency: 50Hz
- Output Voltage: 200V-240VAC
- Output Accuracy:  $\pm 9\%$
- Efficiency: 95%
- Phase: Single phase
- Delay Time: 6s/180s selectable
- Operation Temperature: 0°C ~ 40°C
- Storage Temperature: -15°C ~ 45°C
- Operation Relative Humidity: 10%~90% RH, Non-condensing
- Stabilizer Type: Electromagnetic AVR Relay
- Output Connector: Socket
- Capacity: 4000VA / 1200W
- Cooling Mode: Natural
- Dimension: 200 x 190 x 100mm

## Appliances :

Treadmill up to 3.0HP and above AC/DC motor  
 Supported Up to 2 Ton Air Conditioner  
 Refrigeration equipment: fan, refrigerator, chest freezer, cooler and air conditioner  
 Kitchen appliances: microwave oven, rice cooker  
 Entertainment appliances: TV, DVD, VCR, DVB, HiFi  
 IT & Office types of equipment: PC, workstation, fax machine, photocopier  
 Heating systems: gas boiler, circulation pump

## **TREADMILL BUYING GUIDE**

### **Treadmill Buying Guide : Choose the Right Treadmill for You**

#### **But buyers beware!**

There are more treadmills on the market than any other kind of fitness equipment leaving you the consumer with a mind-boggling choice. This is a mixed blessing. There is now a good range of quality treadmills to choose from but there are many more treadmills out there that you should think very carefully about before spending you're hard earned cash.

#### **Consider the following.**

A good motor fitted to a quality treadmill will have a trade price of INR42000 plus. Yet there are cheap treadmills on the market selling for this price. To be fair even the cheapest treadmills will offer something to those on a tight budget but be warned, they may come with problems. Some of these machines have been designed to last not much more than 6 months because they think that people will not be using them for much longer than that. It sounds unbelievable but true. A lot of these fitness machines are sold on the web. They are bought over by the container from the Far East. The web site sells them off offering all kinds of guarantees then a few months down the line the web site disappears leaving you the consumer with no redress. So if you see a very low priced treadmill its a case of buyer beware.

The following tips will help you maximize your investment, prevent you falling into any traps and also help you reach your desired goals.

#### **Buying your Treadmill**

##### **1. Consider who will be using the treadmill and what their specific goals are.**

It is often the case that there will be more than one person in the family who will be using the treadmill. Discussing each person's goals will help make sure that you purchase workout equipment that will withstand the use of multiple family members and provide the adjustments to accommodate different size users. For example, going for the cheapest option or buying a low quality underpowered motorised treadmill is a common mistake, but one that can cause considerable problems, particularly if it is being used by both a 57 and a 107 Kg person. Also will the treadmill grow with you? In a very short time with regular use you will find your fitness improving and as it does so you will need more from your treadmill. Will it be able to accommodate this?

##### **2. Go to a specialist fitness store and test the treadmill.**

A specialist fitness equipment store should be able to offer a range of treadmills for you to try. They will also be able to show you how to use the treadmill properly and provide installation as well as show you how to do routine maintenance. Then test the exercise equipment yourself.

Almost any treadmill will feel and seem adequate if you just walk on it for a couple of minutes. Its only when you begin to put the treadmill through its paces by jogging or running on it, adding elevation and using different programmes will you start to see and feel the major difference in quality and comfort, even vibration and noise.

When you go to the store wear appropriate clothing so you can test the gym equipment properly. A good treadmill is a major investment. Take your time.

### Location & Space.

Consider where you are going to site your treadmill. There is no problem with putting a treadmill upstairs as long as you appreciate that someone running hard on it will cause some noise and vibration below. A garage is fine as long as its not damp, which would effect the electronics. Conservatories are popular, but if its south facing it may get to hot. If you have a gym room on the ground floor, which is something that is growing in popularity then you have the perfect solution. Space should not be too much of a problem today now that there is such a large range of folding treadmills available. Don't forget that a motorised treadmill is an electric treadmill and will therefore require power from an electric socket.

### Features.

Powermax Fitness  
Treadmill Console

#### Easily Navigable Console

When you look at the treadmill console does it make sense? Do you intuitively know how the buttons work? Is the screen large enough and the workout information easy to read? The sales person will show you the basics but when you get the treadmill home they will not be there to guide you, so make sure you feel comfortable that you will be able to use the console with ease.

#### Cushioned Deck

This is a major selling point for all treadmills now, but not all cushioning systems are the same. The ideal absorption system should be one that feels firm and stable when you run yet still forgiving. It should not feel soft and spongy and slap back at you. This kind of cushioning could cause knee injuries over time and also wear out quickly. Good quality treadmills from respected manufacturers provide cushioning that is researched based and can show evidence on why their system works. There should be methodology in the system other than simply putting in rubber spacers or dampeners. Some treadmills now come with orthopaedic belts, which subtly enhance the cushioning further. The only way you can be sure you like the feel of the cushioning is to test the treadmill. Remember anything that will make your workout more comfortable will result in you sticking with it and achieving your desired goals. eadmill and will therefore require power from an electric socket.

Continuous Duty  
Treadmill Motor

#### 1. Adequate Motor

This is where the confusion really starts. Don't be fooled by the 'bigger is always better' rhetoric. There is more to a treadmill motor than its size. What you should look for is a continuous duty HP motor (continuous duty is a measure of horsepower under regular anticipated use and is far more meaningful than 'peak' horsepower).

In reality 2.0HP and above should be sufficient for any user as long as the rest of the motorised treadmills components are of a high quality. For example a good cooling mechanism will reduce the heat generated by the motor and other major components, prolonging their life and reducing wear on these parts. A large motor with a poor cooling system is not a good combination as this will result in premature wear and poor performance. However a superior cooling system and quality electronics do not come cheap and this is why there is such a disparity in price of motorised treadmills. Try not to focus on just the 'big' or 'quiet' motor, instead look at the treadmill as a whole system, with matching components that work together. It is this that makes the difference between a bog standard cheap treadmill and a quality treadmill.

### Console Feedback

An array of feedback features is available on most motorised treadmills. It is tempting to buy one with everything but before you do, consider what is important to you and the other users of the treadmill and how you will use it. You will certainly need the basic information such as speed, distance, elevation and time. You then need to look for features that will motivate and challenge you such as pace and heart rate. If you get bored easily it may be worth investing money in a treadmill that has a range of different workout programmes, as this will help you stay motivated.

### Folding Mechanism

Folding treadmills use one or two hydraulic pistons to assist with the lifting and lowering of the running deck. Make sure the piston is good quality and does the job. The majority of foldable treadmills have what some brands call a 'softdrop' mechanism. This lets the running deck drop slowly and gently without any intervention from you. It was designed to prevent injury to young children who may have accidentally released the treadmill from its raised locking position. These work very well but again the quality of the piston is crucial. The locking device differs considerably from brand to brand. Some have a simple release handle conveniently positioned at shoulder height, others have a pivoting plate at the bottom of the treadmill that you have to push down with your foot and others have an annoying lever type piston combined support that you have to pull apart. They all work adequately but some are just easier to use. We are often asked if foldable treadmills are less stable than a platform (non-folding) treadmill. Years ago folding treadmills were very unstable compared with a platform treadmill and cheap treadmills still are today. But buy a quality folder and you will be hard pressed to feel the difference.

### Belt -

The belt should be long enough and wide enough to accommodate your running style, if you plan to do a lot of running then look for a belt with a width of 500mm (20") and a length of 1400mm (55").

### Speed -

The maximum speeds will vary between models. Mid range and commercial treadmills have maximum speeds of 20kph (12mph). To give you an idea of speed, world class runners run at an average speed of 20kph during a marathon!

### **Incline (Elevation) –**

If you plan to do a lot of uphill walking or running then look for a treadmill with an incline of 10%. Thankfully most mid range treadmills incline to 10% (some incline to 12%).

### **Maximum user weights –**

Always check the maximum user weight before you purchase. Budget running machines usually have maximum user weights of around 100kg whilst mid range treadmills have maximum user weights of around 130kg.

### **Accessories –**

You can purchase many accessories. At Powermax Fitness Superstore we offer accessories such as: Floor protector Mats, Extended treadmill warranties, Heart Rate Monitors and much more.

### **Remember the must haves when buying a Treadmill**

Easy to read and easy to use treadmill console

Cushioned Deck

Programmes and features on the treadmill that are meaningful to you

An adequate continuous duty HP motor, 2HP or above is best

### **Safety and Maintenance**

Running and walking on a moving piece of exercise equipment is very effective and simple, but for the raw beginner it can also feel unsafe and fraught with quality issues if you don't choose wisely.

#### **Safety Features**

Look for an emergency stop button on the treadmill that is easy to see and accessible, no matter what speed or incline you are running at. There should also be a safety tether key. This is a key that plugs into the treadmill console and has a cord that runs from it that attaches to your clothing. If this key is pulled out the treadmill will automatically stop. Therefore if you fall or faint then the treadmill will not continue running which could cause serious injury. A tether key is ideal for a beginner. Has the treadmill got heart rate features, feedback and interactivity? All these help towards a safe and effective workout. Make sure the treadmill has handrails that are comfortable to hold but are not intrusive. Can you run or walk without your hands or arms hitting them? Testing in store for several minutes will help decide this. Finally the belt speed should rise and fall in gradual increments, guaranteeing you are always in control. When buying fitness equipment, gym equipment or any type of workout equipment safety must always be a priority.

#### **Maintenance**

A treadmill will always require a little maintenance, after all a treadmill is a mechanical and electronic piece of moving exercise equipment. However on a quality treadmill the maintenance should be minimal. Once set up you should not be centring the belt or lubricating the running deck after every workout. A well- designed unit should take in normal wear and tear. Ask the salesman what is required. Some treadmills have reversible running decks. This means that if normal wear and tear takes its course on the running surface the deck can be flipped over, basically doubling the life of the running deck. This is something that can be done by a competent owner but it is always worth asking the store what they will charge to do it professionally. If you have bought quality, professional gym equipment then it may be worth paying that extra to get a professional to look after it. However on a quality treadmill this is something that will not be required for many years.

Treadmill Deck  
Lubrication and  
Maintenance

### Warranty

Today treadmill warranties are almost used as a marketing tool. Companies now compete to offer longer and more comprehensive warranties. This is all well and good as long as the manufacturer is still in business in 10 years time. At minimum the treadmill should have a 3 year motor warranty, 1 year electronics and 1-2 year labour cover. As with everything else and this is probably more so with a treadmill, you get what you pay for. A treadmill has to take an enormous amount of punishment compared to other fitness equipment. For anyone who has regularly visited a health club they have probably found that the one piece of equipment that is out of order more than any other is the treadmill. Therefore the better the quality the less likely you will need to use your warranty.

### Finally

Equally as important, does the dealers from whom you are purchasing the exercise equipment, have their own service staff that are trained and authorised by the manufacturer to service your fitness equipment. At Powermax Fitness we have our own dedicated service engineers who have years of experience.

### Why you should buy your treadmill from Powermax Fitness

- We offer an extensive range of treadmills, covering all budgets
- Your treadmill warranty: All treadmills come with a minimum 1 year parts and labour warranty. Many far exceed this with 3 and 5 year warranties depending on Models
- Treadmill delivery: Delivered direct to your door
- Treadmill installation: Treadmills can be very heavy that is why we would recommend our installation service. Installed by our own engineers.

## **PowerMax Fitness**

### **Never Compromises With Quality of Products.**

1. Powermax Fitness equipments are manufactured from heavy gauge Steel frame duly Powder coated for prevention from corrosion and adds longer life to the machine.
2. All electrical and electronic parts are CE approved for better life and confirm to IS standard.
3. Rollers of Treadmill are dynamically balanced for better life of the conveyor belt and Bearings and ensure smooth workout.
4. Termite and waterproof jogging board for better life of Treadmill.
5. Industrial Graded fasteners and wire ropes to withstand sudden loads.
6. Dust proof panels provided to protect precise electronic parts.
7. All Electrical controls are tested for safety of user from Electric shocks.
8. Belts and flywheels are provided with guards' for safety of the user.
9. Powermax products are Power saving and help to cut on electrical Bills.
10. Pads are constructed of thick, High Density Foam surrounded by top Grade upholstery for a firm contoured feel during workouts.
